About Platform

Hi... I am sunshen,

The core business of block games is the distribution and operation of PC games, and the world's outstanding works are introduced into China through agency introduction, self-development, cooperative sales and other ways. In addition, block games also provide domestic and foreign game developers with one-stop distribution channel cooperation, including fund support, version number application, encryption protection, operation promotion, etc.

Steam platform is a game and software platform developed and designed by Bram Cohen, a BitTorrent developer hired by Valve. Steam platform is one of the largest comprehensive digital distribution platforms in the world. Players can purchase, download, discuss, upload and share games and software on the platform.

RANK
DESCRIPTION

The segment system is usually related to KDA. First, novice players have a victory index, which helps you unlock the segment faster. When your index is 300 or higher, the system will automatically unlock your segment, and your segment will be graded. After the rating introduction, the KDA may fluctuate greatly, but this is a normal phenomenon. Don't worry, just practice more to make the segment stable

The segment system is developed by Sun Shen, and the copyright is reserved

LEADERBOARD DESCRIPTION

The game leaderboard is established to allow players to quickly gain a sense of achievement on the way to play. The leaderboard will record the rank and victory index, but we will not release the KDA index and playing time

SOLUTION
FROM GAME

All materials in the game are from the phantom mall

Product description: a hard core game with rich game experience
Product positioning:
1. For military fans, ESRB (pan Asian rating agency) 17+
2. Market: steam game market, block game platform, page building of its store, official game website, indieova
Product fun:
1. The art style adopts large-scale realistic simulation
2. The background of the times is in 2045
3. Operation and play method: to achieve a higher level by honing skills
Professional system: military
Operating system: windows
Game size: 13G
Network required: Yes
Subsystem online plugins: Yes
Overall introduction to the game: When Cooper showed his strength on the harvest day, Blanc, as the second agent sent by the double line army, went to the slums in the Middle East and Africa to carry out the cleaning operation. The cleaning operation was divided into two parts. The first part was the evacuation mode: the protagonist would wake up from the small house, pick up the weapons in his hands, look for an armed helicopter for evacuation, and watch out for the enemy's blocking in the middle. Because it was an online game, Therefore, we should be careful of the mutiny of teammates. The second part is the survival mode, which is to survive in the slums and abandoned buildings for 15 minutes, wait for the evacuation signal, and stop the oncoming troops. Blanc will get the corresponding score reward after each battle. When the victory point reaches 300, the protagonist unlocks the segment system, and the segment is approved according to the KDA index, death index and victory point. When it falls in the bronze

and silver segment, It means that players need to work hard at this time to earn more points. When they fall in the golden segment, it means that their skills have been significantly improved after training. When they fall in the world guardian segment, it means that your skills are not far away from the supreme eagle. At this time, you need to learn how to use terrain reasonably and prevent sneak attacks. When you enter the supreme eagle segment, congratulations. You have become an excellent double line agent.
Online game mode: monitor server
UI design: It adopts simple style, including the number of ammunition, small map detection, and death prompt, and randomly hides the UI interface
Plot (DLC) mode, Blanc had to observe his simulation outside and use the computer to simulate the supplies needed by the outbound blog in the virtual world in time.
